

PUBLIC NOTICES (CONTINUED)

Violation: Revised Total Coliform Rule (RTCR) – Failure to Routine Monitor October 2025 Our water system is required to sample for Total Coliform bacteria on a monthly basis. We failed to collect the required number of total coliform samples during the month of (Insert month/year) and are therefore unsure of the quality of the water at that time. Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially-harmful, waterborne pathogens may be present or that a potential pathway exists through which contamination may enter the drinking water distribution system. The City of Hope is taking steps to correct this violation of the Revised Total Coliform Rule by returning to a routine testing schedule.

Violation: For the 3rd quarter of 2025, October - December the City of Hope failed to comply with the reporting requirements of the Disinfectants and Disinfection By-products Rule. This rule requires us to monitor monthly chlorine levels and report them to the Department of Environmental Quality on a quarterly basis. Since the required sample was not taken or the report was not submitted on time, we are unsure of the level of disinfectant during that time. Some people who use water containing chlorine well in excess of the MRDL could experience irritating effects to their eyes and nose. Some people who drink water containing chlorine well in excess of the MRDL could experience stomach discomfort. The City of Hope has taken steps to correct this violation of the Disinfectants and Disinfection By-products Rule by returning to a normal reporting schedule.

Fluoride Statement

The water we provide is treated with fluoride addition as a part of the water treatment process to enhance dental health. For information regarding the level of fluoride in the finished water provided to our consumers, please contact our office.

PFAS Statement
Our water supplier, Dakota Rural Water District-South, began initial monitoring for eighteen Per- and polyfluoroalkyl substances (PFAS) in 2025 in preparation for the new PFAS rule that will take effect in 2029. One sample was collected at each Entry Point to the distribution system as required, to determine if PFAS is currently in our drinking water. None of the contaminants included in this round of sampling were detected. Should you have any questions, please contact our office.

Health Statements
Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants That May Be Present in Source Water:
Microbial Contaminants, such as virus-

es and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
Inorganic Contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming.
Pesticides and Herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses. (Pesticide: Generally, any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest. Herbicide: Any chemical(s) used to control undesirable vegetation.)
Organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
Radioactive Contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.
In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.
Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some

elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control and Prevention (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Lead Statement
There is no safe level of lead in drinking water. Exposure to lead in drinking water can cause serious health effects in all age groups, especially pregnant people, infants (both formula-fed and breastfed), and young children. Some of the health effects to infants and children include decreases in IQ and attention span. Lead exposure can also result in new or worsened learning and behavior problems. The children of persons who are exposed to lead before or during pregnancy may be at increased risk of these harmful health effects. Adults have increased risks of heart disease, high blood pressure, kidney, or nervous system problems. Contact your health care provider for more information about your risks.
Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. The City of Hope is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by

identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly.

Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact the City of Hope at (701) 543-3243. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <https://www.epa.gov/safewater/lead>

Lead Service Line Inventory Information
US EPA has recently published the Lead and Copper Rule Revision. The purpose of this revision is to strengthen public health protections by removing lead service lines within public water systems. One requirement of this rule revision was to inventory all drinking water service lines within our public water system and notify consumers which type of line serves each property. You may have recently received a letter from our system with this information. The inventory is a listing of all service lines and the material composition of each line. The types of lines being

documented are Lead lines, Galvanized Requiring Replacement (GRR) and lines made of Unknown Material. Classification of a service line as being comprised of Unknown Service Line material indicates that our system cannot currently confirm the material of both the public and private portions of the line with written records. Non-lead lines were also documented; however, we were not required to notify consumers with documented nonlead lines. The classification of the type of service line serving a residence was based on historical data regarding the property and in some cases verification of the type of material on the privately owned side of the line by visual inspection or replacement records of the owner.

The current Service Line Inventory for our system has been completed and is available for viewing at our office. Please contact the City of Hope at (701) 543-3243 should you have any questions.

Additional work to update the service line inventory, including inspection of the line, may need to be performed to further document and confirm the type of material making up both the public and private portions of the line serving your home or business. We will need the help of home/building owners in order to access the service line on the private side of the service line to positively identify the material of the line that carries water within your home/building. Our system may perform this work with our own system employees, or we may contract with engineering firms or third-party contractors to complete this work to improve our service line inventory.

Classified Ad Deadline
12:00 Noon TUESDAY

Chirping Tree Family Farm greenhouse now open Thurs-Sat, 10-6. We have bareroot trees, hanging baskets, patio pots, bed-

ding & vegetable plants. Located 4 miles south of Galesburg & 1/2 mile west. Questions? Call Ron, 701-793-5990.

HELP WANTED
YOU CAN PLACE a 25-word classified ad—like this one—in every North Dakota newspaper for only

\$160. It's easy. Contact this newspaper for details.

SERVICES
NEED NEW WINDOWS? Drafty rooms? Chipped or damaged frames? Need outside noise reduction? New, energy efficient windows may be the answer! Call for a consultation & FREE quote today. 1-877-200-2734

ELECTRICAL SERVICES: Reliable & experienced. Competitive rates. From simple household problems to installing a brand new electrical system, we can take care of it all! Call now and have the zip code of the service location when you call! 1-877-403-0282

STRUGGLING WITH DEBT? If you have over \$15,000 in debt we help you be debt free in as little as 24-48 months. Pay nothing to enroll. Call Now: 1-877-688-0872

REAL ESTATE FOR SALE
ND FARM LAND Values surge upward. Are you selling or renting? Pifer's Auction and Farm Land Management. Bob Pifer 701.371.8538. Kevin Pifer

701.238.5810. Free evaluation.

MISCELLANEOUS FOR SALE
CASH PAID FOR HIGH-END MEN'S SPORT WATCHES! Rolex, Breitling, Omega, Patek Philippe, Heuer, Daytona, GMT, Submariner and Speedmaster. These brands only! Call 1-833-641-6634

LOOKING FOR THE most complete listing of ND Media? ND Media Guide. Call 701-223-6397, ND Newspaper Association.

WANTED TO BUY
TOP CASH: Old Clocks; Watches; Radios; Signs; Toys; Coin; Jewelry; Fountain Pens; Edison; Military. Anything Old/Antique. Always buying. Call Larry, Brainerd MN, 386-785-3084

AUTOS WANTED
HELP FIND MISSING KIDS and keep kids safe by donating your Car, Truck, Van or SUV to Find the Children. Running or not, no emission test required. Fast free pickup, 24 hr response, May Qualify for Tax Donation. Call 1-833-545-0694

HEALTH/MEDICAL
VIAGRA and CIALIS US-ERS! 50 Pills SPECIAL \$99.00! 100% guaranteed. CALL NOW! 1-833-641-3417
